

Project Title:**Student Fines Clearance System****Submitted by: Marie Antonette D. Rodrigo****Submitted to: Jeremiah Dela Cruz****1. Introduction**

I am developing a simple Student Fines Clearance System. This system helps students complete their clearance process in a faster and easier way by checking and managing student records related to fines and clearance status.

2. Objectives

- To create a simple fines clearance management system
- To apply basic web development skills
- To improve data handling and record management skills

3. Scope and Limitations

Scope:

- Add student records
- Check clearance/fines status
- Update student records
- View student list

Limitations:

- No online approval system
- No login system.
- Simple design only
- Web-based only

4. Features of the System

- Add student information
- Update fines/clearance status
- View student records
- Simple record management system

5. System Process Flow

- User adds a student record
- System saves data in the database
- System displays list of students
- User updates fines or clearance status

6. Tools and Technologies

- HTML, CSS – design
- PHP / JavaScript – functionality
- MySQL – database
- Visual Studio Code – coding

7. Conclusion

This project helps manage student fines and clearance records in a simple and organized way. It also improves my skills in developing basic web-based systems and handling data efficiently.
