

Project Title:

Simple Smart To-Do List Application

Submitted by:

Maria Theresa C. Peñaso

Jeremiah Dela Cruz

1. Introduction

Technology continues to evolve with the help of emerging technologies such as Artificial Intelligence (AI). These advancements make applications more efficient and user-friendly.

This project aims to develop a simple to-do list application with basic smart features that help users manage their daily tasks more effectively. The system will include simple AI-like logic to prioritize tasks and improve productivity.

2. Objectives

- ❖ *To develop a simple task management application*
- ❖ *To apply basic concepts of application development*
- ❖ *To integrate simple smart (AI-like) features*
- ❖ *To complete a functional system within one week*

3. Features of the System

- ❖ *Add tasks*
- ❖ *Edit tasks*
- ❖ *Delete tasks*
- ❖ *Mark tasks as completed*
- ❖ *Simple smart prioritization (important or urgent tasks appear first)*

4. Tools and Technologies

- ❖ **HTML, CSS** – for designing the user interface
- ❖ **JavaScript or PHP** – for system logic and functionality
- ❖ **MySQL** – for database management
- ❖ **Visual Studio Code** – for coding and development

5. Conclusion

This project demonstrates how a simple application can be enhanced using basic concepts of emerging technologies such as Artificial Intelligence. By developing a smart to-do list application, users can manage their tasks more efficiently through organized and prioritized lists.

Within one week, this project will result in a functional and user-friendly system that highlights the importance of combining application development with smart features. It also helps improve programming skills and understanding of modern technologies.
